SUMMARY

AWS-certified Senior Full-Stack Engineer with 8+ years of experience building e-commerce and SaaS applications. Extensive backend experience with Node.js, NestJS, and PostgreSQL, including REST and GraphQL APIs, complex payment systems, authentication and role-based access control, background job processing with BullMQ, and database performance optimization. Experienced in building React and Next.js interfaces for complex checkout and subscription flows, document and media management, and administrative workflows. Skilled in building CI/CD pipelines with GitHub Actions, managing AWS infrastructure (ECS, Lambda, EC2), and optimizing cloud costs.

TECHNICAL SKILLS

Languages: TypeScript • JavaScript • Python (scripting, automation)
Backend: Node.js • NestJS • REST APIs • GraphQL • BullMQ • Auth0
Frontend: React • Next.js • Redux • Zustand • TanStack Query • TanStack Router • Tailwind CSS • MUI
Cloud & DevOps: AWS • Docker • Terraform • GitHub Actions
Databases & ORM: PostgreSQL • MySQL • Redis • Prisma ORM • TypeORM
Testing & Observability: Jest • Vitest • Cypress • Playwright • Sentry
Payment Integrations: Stripe • Moneris • Sola
Development Tools: Claude Code • Cursor

EXPERIENCE

Senior Software Engineer July 2025 – September 2026
NFK *Remote | Company HQ: Baltimore, MD*

- Designed and delivered a payment subsystem for an event-based marketplace serving thousands of users per event, **supporting online and in-person checkout with multiple payment methods** (e.g. credit cards, payment terminals, ACH). Integrated a third-party payment gateway and implemented **idempotent payment processing, secure webhook handling, tax and surcharge calculations**, and receipt printing
- Built refund and payment reversal workflows, including automated refund processing and manual-refund tooling, **reducing manual accounting reconciliation time by 60%**
- Led development of the core e-commerce GraphQL API using NestJS, Vendure, and PostgreSQL, building modular services across payments, orders, inventory, search, and administrative workflows
- Developed custom features for the React-based admin panel, including refund processing, order and product management, and e-commerce reporting tools
- Replaced the platform's default search implementation with a Meilisearch-backed admin search layer for orders, customers, and products, **reducing p95 search response times by 30%**
- Developed BullMQ background jobs for scheduled customer notifications, report generation, and asynchronous bulk order processing, implementing retry strategies, failure handling, and concurrency controls
- Integrated Sentry for production error monitoring and performance tracing, enabling identification of runtime errors and application performance bottlenecks

Senior Software Engineer January 2024 – June 2025
WestLink *Remote | Company HQ: Denver, CO*

- Developed a multi-tenant file-sharing platform used internally by a large financial services organization, using NestJS and Next.js. Implemented **role-based access control (RBAC), Auth0 authentication, and security controls as part of SOC 2 Type II** audit preparation
- Built file management features using Next.js and Tailwind CSS, integrating Uppy.js and AWS S3 for file uploads and developing interfaces for managing and previewing PDFs, images, videos, and office documents
- Optimized PostgreSQL queries through slow-query analysis, **reducing query latency by 37%**
- Maintained containerized production services on Amazon ECS, investigated and resolved production incidents, and conducted security reviews of the underlying AWS infrastructure
- Created a company-wide **reusable NestJS project template**, mentored junior and mid-level engineers through code reviews and technical guidance

Software Engineer January 2023 – December 2023
cPunto *Remote | Company HQ: Montréal, QC*

- Owned frontend development of a **multilingual, multicurrency e-commerce storefront** for electronic components, serving 1500 DAU
- Migrated the storefront from client-side rendering to **Angular Universal SSR** to improve search engine crawlability, and diagnosed and **resolved server-side memory leaks** through runtime profiling
- Developed core storefront features, including authentication, product catalog, and checkout flows, using Angular, Tailwind CSS, and NgRx for state management
- **Optimized Core Web Vitals** through Angular route-level lazy loading, image optimization, and JavaScript bundle size reduction
- **Reduced AWS infrastructure costs by 25%** through resource utilization analysis and elimination of unused or overprovisioned services
- Implemented **backend unit tests with Jest and end-to-end tests** for critical application workflows with Cypress

Software Engineer March 2018 – December 2022
Techlantis *Remote | Company HQ: Melbourne, VIC*

- Contributed to the development of a major Australian cloud-based strata-management platform
- Developed AngularJS interfaces for building and apartment management, parcel tracking, and customer notifications
- Designed MySQL database schemas and developed backend APIs supporting the platform's AngularJS applications
- **Migrated functionality from a legacy PHP backend to Node.js**, improving maintainability and consistency across the application
- **Owned end-to-end development of an e-commerce storefront** for a VPN router product using PHP and jQuery, implementing Stripe checkout and custom UI animations
- Built a Vue.js-based management interface for a VPN router, implementing connection workflows and hardware status monitoring

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | **Amazon Web Services** 2026

EDUCATION

Novy Urengoy College of Gas Industry
Technical Diploma, Automation of Technological Processes and Production 2018

LANGUAGES

English – **Fluent**
Russian – **Native**
